Mr. Ray C. Engel, President  
Energy Technology Laboratories  
2351 Tenaya Drive  
Modesto, CA 95354

Dear Mr. Engel,

Regarding your request for our evaluation of the health benefits of your Company's Resort Spa Signature and Simply Sensual Body Spa Skincare Showers, we submit the following report:

The principle of "oxygenics" on which your technology is based can be illustrated by the oxygenic action of a waterfall. As the water falls, turbulence is created, which draws in and mixes air with the water. The air (oxygen) helps purify the water by creating negatively charged ions that counter damaging, positively charged free radicals.

The "Oxygenics" Technology incorporated into the ETL Skincare Showers produces the following effects:

**Wetting and Exfoliation.** The ETL Skincare Showers induct the air through specially designed ports and inject it into the water. This injection and interspersion of air "turbo charges" the stream of water, creating a turbulent, energized shower spray that serves to thoroughly wet and exfoliate the surface of the skin on impact, effectively removing dead skin cells, debris and bacteria.

**Cleansing and Rinsing.** Because of the energy of the water, and unique pattern of large water droplets, the spray has a faster and greater wetting and rinsing effect than other shower products. It deep cleanses the pores and produces a more thorough rinsing of soap, shampoo etc. that otherwise can have an irritating and drying effect on the skin.

**Stimulation, Circulation and Collagen.** The energized, oxygenated spray stimulates the skin, producing a tingling effect that is like a "wake up call" for skin cells. It increases blood circulation and the flow of nutrients to the cells in all layers of the skin, raising their level of activity and health, and promoting new cell growth. It increases the production of collagen, which has significant anti-aging benefits that are especially important to the face.

Dr. John Harvey Kellogg reports regarding this stimulating action of water on the skin:

“This forceful application of a stream of water, acting on the nerve endings in the skin, produces a *tremendous* action and reaction upon the entire circulatory system. It invigorates deep nerve centers and nerve ganglia that are connected with every artery. As this circulation is affected, *the quality of the blood improves!*” This stimulation increases cell activity and the flow of hormones into the blood stream, promoting general health and vigor. “Water for Health and Healing” reports that this cellular stimulation can even extend to an increase in sexual virility in both males and females.

Research done by Dr. Donald Donsbach at the “Al-Don Medical Research Institute and Santa Monica Hospital” further documents the therapeutic benefits of oxygen applications.

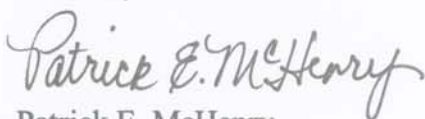

**Oxygenation and Purification.** The same principle of Oxygenics as the waterfall is used in the Skincare Showers; only more so, because the shower’s stream of water is *charged* with oxygen, creating an effervescent negative ion purified spray that is like a revitalizing “breath of fresh air” for the skin cells. The resulting reduction of free radical activity level makes the skin healthier and more vibrant. It also has an anti-aging effect.

**Showering performance.** Although not directly part of the testing and evaluation you requested, the non-scientific, subjective effects of using the Skincare Showers can be important to physical and psychological health and disposition. The stimulating “wake up call” and “breath of fresh air” from showering with the product have a very refreshing effect on the bather. This is important, because the shower frequently sets the tone for how the bather physically and mentally starts (or ends) the day. This in turn has an impact upon their health, their looks and, daily outlook on life.

**Bathing Efficiency.** Another factor that we noted was “efficiency.” While some people have the time to linger in the shower, most want to wet, soap, rinse and get out of the shower as quickly as possible. This is difficult to do with the reduced flow shower products we have tested, which generally have weak wetting and rinsing performance. If someone is in a hurry, a slow, time consuming shower can be an aggravating experience, contributing to stress. On the other hand, a quick, effective shower can reduce stress and literally “make their day.”

Thank you for the opportunity to evaluate your company’s products Mr. Engel. I hope this report will help to answer questions about the operation and health benefits of the Oxygenics Technology you have incorporated into them.

Sincerely,

Patrick E. McHenry  
President
